

Adding Offspring

Last Modified on 05/01/2025 4:07 pm MDT

Bringing a new animal into this world on your farm can be both an exciting and challenging experience, with many variables to account for. So, one aspect we don't want you to worry about is the record-keeping process. Farmbrite simplifies the process of adding offspring to an existing animal with just a few clicks.

First, navigate to Livestock in the main menu, and then select the animal that has given birth. If you have a lot of animal records to look through, you might find it easy to [filter to find the record you're searching for](#). Select the animal once you find it, and you'll be presented with detailed information. From here, it's as easy as clicking the Record Activity button and choosing Record Birth.

Animals	Cattle	Chicken	Bison	Other	Male	Female	Pregnant
169	92	33	23	21	37	70	52
100% OF 169	54% OF 169	20% OF 169	14% OF 169	12% OF 169	27% OF 136	51% OF 136	38% OF 136

Animal	Gender	Age	Weight	Status	Type/Breed
Bison 05	Female	3 years	990.00	Active Exposed	Bison
Bison 07	Female	3 years	985.00	Active Pregnant	Bison
B0	Female	3 years	1,280.00	Active Exposed	Bison
B1	Female	3 years	1,350.00	Active Exposed	Bison

You can then supply the details of the offspring in the window that opens. After adding the basics, you'll see a section for Birth Information that might be particularly relevant at this stage. Notice that the Dam (Maternity) field is prepopulated in our example below, as we recorded this birth from Bison 07. We'll choose a Sire, add a birth weight, and then continue below to Save.

New Animal

Basic Information

Name Or Label:

Animal Type:

Breed:

Sex:

Label/Keywords:

Internal Id:

Status:

Physical Characteristics

Neutered Neutered

You'll find the Dam record updated with a field for Recent Births, and a new birth Activity recorded in the

log on the right. You can click the Offspring tab in the animal's menu to see the new addition to your farm. You will also see them added on the [Livestock Reproduction Report](#).
