

What are your sub-processors, as defined by the GDPR?

Last Modified on 05/03/2024 12:16 pm MDT

Under the GDPR regulations, a sub-processor is any business or contractor customer data may pass through as a side effect of using Farmbrite's services. This definition is very broad and includes things some might simply consider "hardware", like cloud infrastructure.

We use partners for some business processes that important, but not critical to our customers having a quality experience.

Provider	Purpose	Location
ActiveCampaign	Customer emails	USA
Alchemer	Customer feedback surveys	USA
