

How do I update the animals included in a Smart Group?

Last Modified on 10/04/2021 11:51 am MDT

Smart Groups are created by using filters to find animals with common characteristics. You might create groups based on Type, Breed, Birth Date/Age, Gender, Breeding Status, and so on. New animals that meet the group's filter criteria are automatically added to the Smart Group, but what if you need to change those filters and add or remove additional animals? You can do that by editing the Smart Group.

Navigate to **Livestock**, and then choose **Groups**. From there, select your Smart Group.

NAME	ANIMALS	TYPE
Bees	0	Set
Cattle Spring21	29	Smart
Corral 2	5	Basic
Elk Herd	12	Smart
Farm Pets	2	Basic
Female Bison Herd	29	Smart

After selecting your Smart Group, choose **Edit Group** in the upper right.

TYPE	BREED	NAME	TAG NUMBER	STATUS
Bison	Bison	Bison 02	DCR51A	Active
Bison	Bison	Bison 03		Active
Bison	Bison	Bison 04		Active
Bison	Bison	Bison 05		Active
Bison	Bison	Bison 06		Active
Bison	Bison	Bison 07		Active

All of the filters used to determine the animals eligible for this Smart group are displayed. **Update them** as you see fit to include additional livestock, or exclude those who should no longer be part of the Smart Group. In our example below, we're changing our Female Bison Herd to an Exposed Bison Herd, as we are no longer going to filter by gender, and will now include intact males with our female breeding stock.
