# Using Your Crop Plan

Last Modified on 08/26/2025 7:12 am MDT

Outlining and following a plan for your crops is critical to your farm's success - you need to know when to start your seeds, when to transplant your seedlings, and when your mature plants will be ready to harvest. Having all of that information in an easy-to-read chart is helpful, and will keep you on track - especially when planting successive crops in the same location immediately after a harvest. Gone are the days of your marked up and scratched out calendar in your greenhouse conflicting with the notes you left for your farmhands - you'll now have a single source of truth that is easily accessible, sharable, and printable.
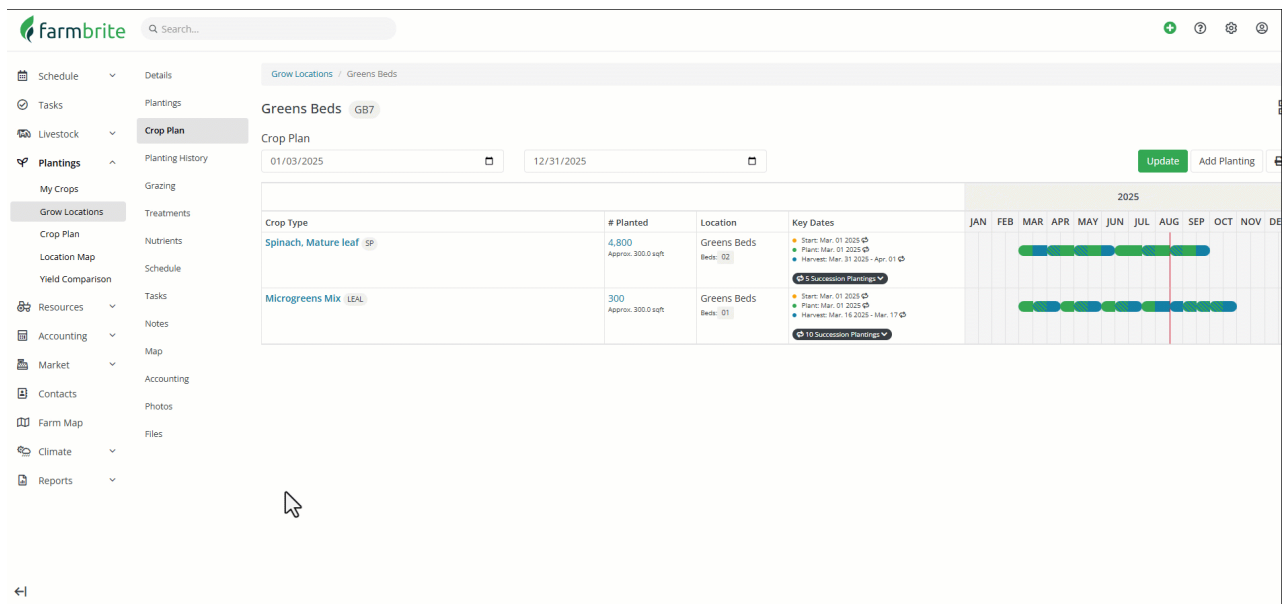

Once your crops are planted, you'll see your Crop Plan in multiple places.

- You can view your **entire farm's Crop Plan** by choosing Crop Plan from the Crops section of your left navigation menu.
- You can get more granular and see an **individual grow location's Crop Plan** by choosing Crop Plan from within that location's menu.

Each planting is shown on your Crop Plan, with a date range selection across the top. You can choose what dates to display here, and the months are shown in the columns to the right. The planting is charted from seed start to planting to harvest in the calendar, shown in three different colors. Yellow denotes your seed is started, green is for planted, and blue shows your harvest time! If your crops are directly sown, you won't see the yellow dates though, as they'll be planted immediately.

If the same crop is planted multiple times in the same grow location, you'll see those succession plantings grouped together on a single line with each planting represented in the time chart. You can click to expand the row and view the plantings, or collapse it to revert back to the single line. In our example below we have Spinach and Microgreens planted in Beds 1 and 2 in the Greens Beds throughout the summer season.

If you'd like to reorder the rows, you can click on any of the column headers to sequence them differently. Perhaps you want to see them by date, or by grow location, or by type.

The key dates within the months are also shown, so you will know exactly when to start and plant to hit the estimated harvest date. The crop Plan will also show you the number planted in that location so you can be sure to have your seeds/seedlings ready to plant! If you'd like, you can print this out as well using the print icon at the top.

Reach out to us if you have any additional questions about your Crop Plan - We are glad to help!
