

# Tracking Plant Growth Stages

Last Modified on 04/24/2026 8:08 am MDT

Tracking the different stages of plant growth can help you find efficiencies and fix potential problems with your processes. You can track your growth from starting your seeds, through germination and seedling stages, and then into vegetative growth, flowering, and ripening. This can be done for each crop planted in each grow location, giving you insight into the effects of different variables in your process.

You'll track these growth stage changes after you've started your planting. For more information on creating a planting, [check out this help article to get started](#). You can update the growth stage as you notice these changes in your plants without changing the planting date, or affecting previous growth stage records and your planned harvest date.

To move your plants to the next stage of growth, click the Edit button on your planting, and then set the updated growth stage and date. You'll see the current growth stage updated on the planting page.

### Overview

Crop	Peppers (Hot), Serrano
Grow Location	Northeast Field A - Bed: O2
Internal ID	SerrPepps-NEA-BO2
Amount Planted	87.11 sqft
Growth Stage	Vegetative
Market Value	\$140.00 Planned

### Planting Details

Start Method	Start in Trays, Transplant in Ground
Seed Start	May. 01, 2022 (about 2 months ago)
Planting Date	Jun. 18, 2022 (4 days ago)
Tray Number(s)	
Planting Info	Planted in 7 rows (7 per row) 16.0 inches between plant, 16.0 inches between row.

### Harvest Information

Planned First Harvest	Sep. 04, 2022 (in 2 months)
First Harvested	

### Planting History

- May. 01, 2022  
Seed Started **49**  
100% Seed Started Rate  
-8 Days to Seed Started
- May. 20, 2022  
Vegetative **49**  
100% Vegetative Rate  
11 Days to Vegetative
- Jun. 18, 2022  
Planted **49**
