

# Adding and Removing Animals from a Set Group

Last Modified on 06/24/2022 6:53 am MDT

When you create a livestock group as a set, you generally think of the group as a single unit, and don't necessarily track unique individual animals within it. The total number of animals within the group is likely more important. This quantity will need to be adjusted as you purchase animals and they reproduce, or as you lose animals to disease or predation. Farmbrite can help you track the number of animals in your set group over time by easily adding or removing animals from the group.

To adjust the number of animals in your set group, navigate to Livestock in the main menu, and choose Livestock Groups. Select your set group, and you'll be brought to the main details page for it. The current number of animals in the group is shown here; you can click it to add or remove animals from the group

In our example below, we're recording that we recently lost 2 chickens to a predator; a coyote came through and bypassed our best coop defenses. Note all the different reasons for the change available for you to choose though. Whether you are adding or removing animals, select the reason, supply the quantity, specify when this happened, and optionally write a short description. Click save when you are finished.

The screenshot displays the Farmbrite interface for managing livestock groups. At the top, there is a search bar and user information (Quick Add, Account, Chris, Help). The left sidebar contains navigation menus for Schedule, Tasks, Livestock (with sub-items Animals, Livestock Groups, Grazing, Livestock Inventory), Plantings, Resources, Accounting, Market, Contacts, Farm Map, and Reports. The main content area is titled 'Livestock Groups' and includes a 'New Livestock Group' button. Below this is a table with the following data:

Name	Animals	Type
Bees	30,000	Set
Chicken Flock Rhode Island Red	35	Set
Corral 2	5	Basic
Elk Herd	12	Smart
Female Bison Herd	27	Smart
Rabbits	24	Smart

After making the updates, you'll see a list of recent activity displayed on the right hand side. If you'd like to see more details about these changes, you can click the History button. You'll find a log of the changes displayed here, along with charts and graphs at the top of the page to visualize this data. These show the changes in group quantity over time, and the different reasons for animal loss.
