

# Adding a Crop Treatment

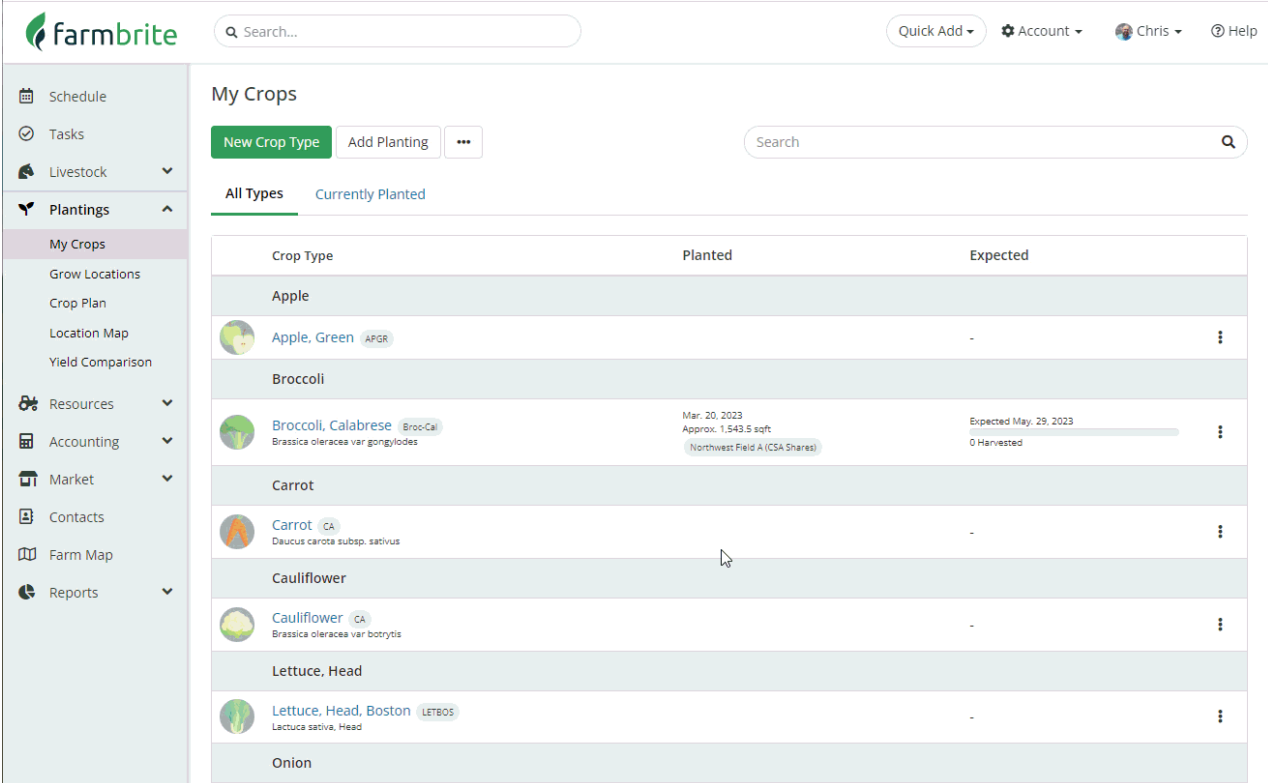

Last Modified on 05/05/2023 11:53 am MDT

You'll probably want to keep track of the treatments you administer to your crops to have accurate records of what took place, and when. Whether we're talking about fertilizing a whole field, applying insecticide, or combating mold and mildew on individual plants, Farmbrite helps you to easily record and track all the different ways you'll care for your crops throughout the season.

*Treatments can be recorded for individual plantings, or applied to a grow location overall.*

## Creating a New Treatment for a Planting

To begin adding a treatment to one of your plantings, first select Plantings, and then My Crops from the left navigation menu. Choose the Crop Type to work with, and then select a current planting. From there, you'll be able to choose Treatments on the left, and then create a new Treatment.

The screenshot shows the Farmbrite web interface. The left navigation menu is open, highlighting 'My Crops'. The main content area is titled 'My Crops' and contains a search bar, a 'New Crop Type' button, and an 'Add Planting' button. Below this is a table with columns for 'Crop Type', 'Planted', and 'Expected'. The table lists several crop types: Apple, Broccoli, Carrot, Cauliflower, Lettuce, Head, and Onion. The 'Broccoli, Calabrese' entry is expanded, showing details like 'Mar. 20, 2023', 'Approx. 1,543.5 sqft', and 'Expected May. 29, 2023'. The 'Onion' entry is also visible at the bottom of the list.

Crop Type	Planted	Expected
Apple		
Apple, Green <small>AFGR</small>		
Broccoli		
Broccoli, Calabrese <small>Brocc-Cal</small> <small>Brassica oleracea var gongylodes</small>	Mar. 20, 2023 Approx. 1,543.5 sqft <small>Northwest Field A (CSA Shares)</small>	Expected May. 29, 2023 0 Harvested
Carrot		
Carrot <small>CA</small> <small>Daucus carota subsp. sativus</small>		
Cauliflower		
Cauliflower <small>CA</small> <small>Brassica oleracea var botrytis</small>		
Lettuce, Head		
Lettuce, Head, Boston <small>LETBOS</small> <small>Lactuca sativa, Head</small>		
Onion		

You may want to optionally provide any of the following information. Not all fields are relevant to all Treatment Types, so supply what makes sense to you for the treatment record you are adding.

- Treatment Type - Choose what type of treatment you'll be applying; you'll find things like herbicide, pesticide, nutrients, and more.
- Details/Product - What product did you use for this treatment? Perhaps a specific nutrient solution or other pesticide.
- Batch Number - The serial/identification number of the product used.
- Amount Applied - How much of the product did you administer to the planting?
- Subtract From Inventory - If you're tracking items used in this treatment in your Farmbrite inventory,

you can choose what to subtract, and how much of it was used. This will deduct the item used from your inventory quantity.

- [Application Method](#) - How did you apply this treatment? Granules, Spray, or other.
- [Treatment Location](#) - Where did you administer this treatment on the planting? This generally refers to a physical location on the plant such as leaf, seed, soil, etc.
- [Retreat Date](#) - When will this planting require a second dose of this product? This will also automatically create a task for you to remember to retreat on this date.
- [Technician](#) - who performed this treatment?
- [Total Cost](#) - What did this treatment cost? Optionally check the box to add this cost as an expense to your Farmbrite Accounting system, so that it can be taken into consideration on your P&L statement.
- [Description](#) - Provide any additional information relevant to this treatment that you would like added to the record.
- [Treatment Date](#) - When did this treatment take place?
- [Keywords](#) - Add keywords to associate with this treatment record; these are used when searching all records in the future.

Once you've added your treatment details, click **Save Treatment**.

The screenshot shows the 'New Treatment' form in the Farmbrite application. The form is a modal window with a close button (X) in the top right corner. It contains several input fields and checkboxes. The 'Treatment Type' field is a dropdown menu. The 'Details/Product' field is a text input. The 'Batch #' and 'Amount Applied' fields are text inputs. The 'Subtract From Inventory' field is a dropdown menu. The 'Inventory Amount Used' field is a text input with a dropdown arrow. The 'Application Method' field is a dropdown menu. The 'Treatment Location' field is a text input with the value 'Leaf, Seed, Soil'. The 'Retreat Date' field is a date input with the placeholder 'mm/dd/yyyy' and a calendar icon. The 'Technician' field is a text input with the placeholder 'example: Alpine Vet, etc'. The 'Total Cost' field is a text input with a dollar sign and a help icon. There is a checked checkbox for 'Record Expense'. The 'Description' field is a large text area. The 'Treatment Date' field is a date input with the value '05/05/2023' and a calendar icon. The 'Keywords' field is a text input with a magnifying glass icon and the placeholder 'example: monthly application, etc'. At the bottom right of the form are 'Cancel' and 'Save' buttons.

## Creating a New Treatment for a Grow Location

We know you might also apply treatments to a whole field at once, so you can also access this feature from the Grow Locations menu. Just navigate to Plantings, select Grow Locations, and then choose the location you'd like to work with. Choose Treatments, and the same window will open for you to supply the same fields. This may work well for whole field fertilizing or herbicide application.
