

Removing Animals from a Basic Group

Last Modified on 05/23/2023 6:45 am MDT

You might need to remove animals from a group for a variety of reasons. In our article for [Creating Livestock Groups](#), we build a basic group of goats with a donkey added for some protection from our local coyotes. But what if that donkey is a bit too stubborn, or a few of those goats need to be put in a different group instead? The groups you build won't necessarily last forever, so we've created an easy way to remove them; this can be done for a single animal, or for multiple animals at once.

To get started, simply **choose your Livestock Group** to see a list of all animals included.

If you **hover over the icon next to the animal, you'll see a checkbox to select it**. You can select a single animal or multiple at once by checking their boxes.

Next, **click the button for Bulk Actions** at the top of the column and **select to Edit Selected Animals**.

A new window is presented; scroll to **find the field for Basic Group**. From this menu, you can assign the animal(s) to a different group, or select No Basic Group to remove them from groups entirely. Click Update Animals once you've made this selection, and your animal will be reassigned/unassigned from the group.

The screenshot shows the Farmbrite web application interface. At the top left is the Farmbrite logo. To its right is a search bar. Further right are buttons for 'Quick Add', 'Account', 'Chris', and 'Help'. A sidebar on the left contains navigation icons and labels: Schedule, Tasks, Livestock (with a sub-menu for Animals), Livestock Groups (highlighted), Grazing, Livestock Inventory, Plantings, Resources, Accounting, Market, Contacts, Farm Map, and Reports. The main content area is titled 'Livestock Groups' and features a green 'Add Livestock Group' button and a search bar. Below these is a table with the following data:

Name	Animals	Type
Cattle Herd	5	Basic
Bees	2,500	Set
Chickens Rhode Island Reds	50	Set
Goats	5	Basic
