Data Imports

You'll learn how to import your existing farm data into your new Farmbrite account in this video tutorial. We will import some animals as an example, but the process you learn is applicable to many areas of the software.

Additional Articles and Videos to Explore

After you have watched the video, you can browse these articles to learn more about the specific features that you are interested in.

- How do I import my bank data? - Transferring income and expenses from your bank or credit card doesn't have to be a manual process! If you can export transaction data from their website, you can likely get it into Farmbrite. You can use the file they provided directly, or copy your data into our template and upload from there.

- How do I add or update animals via import? - You can add your animals via import like the video above, and you can also update them as well. If you have a mass change you'd like to make, or lots of data to add, you can update your existing records using a spreadsheet if you'd like.

- Importing Your Map - Sometimes mapping your fields can be difficult to get exactly right. If you have your field data in an existing GIS system, or something like Google MyMaps, you can export it from there and upload the GPS points to have Farmbrite draw the polygons for your fields and beds.

- Importing Climate Logs - Do you have a weather station that exports data to a spreadsheet? You can create Climate Log records through an import to save time and start graphing your local microclimate.
