

# Reporting

Last Modified on 02/23/2025 9:33 am MST

In this video tutorial we'll go over how to access and generate Farmbrite's standard reports, and how you can create your own custom reports that meet your business needs.

## Additional Articles and Videos to Explore

After you have watched the video, you can browse these articles to learn more about the specific features that you are interested in.

**Creating Custom Reports** - While you'll have many standard reports that are applicable to most agricultural operations, if you'd like to build something unique, you can do that too! You'll choose what fields you'd like to display on the report, how it should be filtered, and then select optional sorting, grouping, and totaling. The reports are saved automatically for easy one click access going forward.

**Accounting Reports** - Access this section to learn more about your Profit and Loss, Tax Summary, Spending by Category, and more. Importantly, be aware that the Profit and Loss displays your income and expense by the Category it was assigned to, while the Tax Summary shows this based on Tax Line.

**Livestock Reports** - This section includes many basic reports to see record history like treatments, inputs, measurements, and yields. You'll also see data analysis reports for breeding and yielding too. This would be a great place to compare the breeding results from your Dams, or the daily production results from your cows and chickens over time.

**Planting Reports** - Similar to the livestock reports, you'll find both record keeping reports, and production performance analysis reports here too! Your Planting Guide and Seed Order reports can also be helpful for planning your season!
