

Warehouse History

Last Modified on 04/13/2026 3:38 pm MDT

Knowing what was added and removed from a warehouse can help you keep track of what you have, and where it was used. Just like your inventory items, you'll find a running list of all additions and reductions to each warehouse on it's record. This shows you how much was added or subtracted, and what it might have been connected with. This could be a harvest addition, treatment usage, product sale in your online store, and more.

You'll see a tab for Warehouse history when you access your warehouse. Just navigate to your warehouse lists and pick the one you'd like to work with. You can then select history from the menu. This is a running log of what was added, removed, and adjusted from your warehouse. This history contains the reason and source for the inventory change as well, making it easy to see why these items were added or removed from your warehouse. Beyond that, you'll find a Location History Report that shows these logs for all of your warehouses as well. *Note: you can find a similar history for each [inventory item](#) under it's record as well.*
